Profile Summary

Senior DevOps and Cloud Platform Engineer with 8+ years of experience designing, automating, and managing enterprise cloud infrastructure across Microsoft Azure and AWS. Hands-on expertise in Kubernetes platform engineering, AWS EKS, Azure AKS, Terraform-based infrastructure provisioning, Helm deployments, and CI/CD automation using GitHub Actions, Azure DevOps, and GitLab CI/CD. Experienced in implementing secure Kubernetes workloads through IRSA, External Secrets Operator, IAM, and least-privilege access, along with AWS networking, ALB ingress, SSL/TLS, and cross-account ECR integration. Strong background in DevSecOps, infrastructure optimization, production observability, and operational troubleshooting using SonarQube, Datadog, Grafana, and PagerDuty. Also experienced in enabling GenAI application infrastructure and leveraging Claude Code and CursorAI to accelerate infrastructure automation and engineering workflows.

Key Achievements

- Contributed to approximately $0.5M in Azure cloud infrastructure cost savings through resource cleanup, rightsizing, storage optimization, and governance improvements.
- Reduced deployment timelines by up to 50% through Terraform, AKS, CI/CD automation, and cloud modernization initiatives.
- Improved production observability and operational reliability through Datadog monitoring, alert optimization, Kubernetes troubleshooting, and DevSecOps integration.

Technical Skills

- **Cloud Platforms:** Azure (AKS, ADF, VMSS, Azure Functions, VMs, Storage, Networking), AWS (EKS, EC2, ECS, ECR, S3, RDS, IAM, Secrets Manager, ACM, Route 53)
- **CI/CD & DevOps Tools:** Azure DevOps, GitHub Actions, Jenkins, GitLab CI/CD
- **Containerization & Orchestration:** Docker, Kubernetes, AKS, EKS, Helm 3, Docker Swarm
- **Infrastructure as Code & Configuration Management:** Terraform, ARM Templates, Ansible
- **Programming & Automation:** Python, PowerShell, Bash/Shell Scripting
- **Monitoring & Observability:** Datadog, Grafana, PagerDuty
- **Security & DevSecOps:** IRSA, External Secrets Operator, SonarQube, OWASP ZAP, CodeQL, Dependabot, IAM, RBAC, Least-privilege Access
- **Networking:** AWS Application Load Balancers, Ingress Grouping, Path-Based Routing, SSL/TLS, VPC
- **Cloud Cost Optimization / FinOps:** Azure Cost Management, Rightsizing, Resource Optimization, Governance
- **Build, Application & Web Servers:** Maven, Node.js, IIS, Nginx
- **Version Control & Artifact Management:** Git, GitHub, Azure Repos, GitLab
- **Operating Systems:** Linux, Windows Server
- **Project & Collaboration Tools:** Jira, ClickUp, Azure DevOps
- **AI-Assisted Development:** Claude Code, CursorAI, Prompt Engineering

Certifications

- Microsoft Azure AI Fundamentals (AI-900) – Microsoft
- GitHub Advanced Security (GH-300) – GitHub
- Microsoft Azure Administrator (AZ-104) – Pursuing

Professional Experience

Senior DevOps Engineer

WinWire Technologies India Pvt. Ltd., Hyderabad *May 2025 – Present*

Retail Project | Hybrid Azure Infrastructure and DevOps

- Managed hybrid on-premises and Azure infrastructure for a retail application using Terraform, AKS, VMSS, and Azure cloud-native services.
- Built and maintained GitLab CI/CD and Azure DevOps pipelines for application releases and infrastructure deployments; automated operational tasks using Ansible and PowerShell.
- Collaborated with AI and data engineering teams to provision Azure infrastructure for GenAI application deployments, covering compute, networking, storage, and identity requirements.
- Automated deployment workflows for GenAI and LLM-based applications using Azure DevOps and GitLab CI/CD; leveraged Claude Code and CursorAI to accelerate Terraform scripting, pipeline troubleshooting, and infrastructure code reviews.
- Configured Datadog dashboards, monitors, and alerts to improve production observability, incident detection, and response.
- Led Azure cost optimization initiatives through resource rightsizing, storage optimization, governance improvements, and cleanup of idle VMs, unattached disks, stale snapshots, outdated images, unused storage accounts, and non-production assets, contributing to approximately $0.5M in infrastructure cost savings.

Pharmaceutical Project | AWS EKS Platform and DevSecOps

- Standardized Helm charts and Kubernetes manifests for AWS EKS microservices across DEV, TST, VAL, and PRD; resolved pod startup failures and configured cross-account ECR access.
- Implemented IRSA and External Secrets Operator for pod-level authentication and AWS Secrets Manager synchronization; replaced shared database credentials with dedicated, least-privilege RDS PostgreSQL accounts.
- Consolidated Kubernetes Ingress rules using ALB Ingress Grouping to avoid duplicate load balancer provisioning; configured ACM certificates, SSL/TLS, health checks, and path-based routing through security interceptors.
- Resolved GitHub Actions runner concurrency, job queuing, and commit cancellation issues; maintained environment-specific Terraform variables for phased releases.
- Integrated SonarQube scanning and custom quality gates into CI/CD workflows to identify code quality and security issues before deployment.

DevOps Engineer (L2)

HealthWorksAI (Teg Analytics), Bengaluru *August 2022 – April 2025*

- Automated Azure infrastructure provisioning with Terraform, reducing deployment time by 30% and improving environment consistency.
- Designed and maintained Azure DevOps CI/CD pipelines, increasing deployment frequency by 40% and reducing manual intervention.
- Migrated legacy on-premises applications to AKS, improving scalability and deployment reliability while reducing operational costs by 20%.
- Developed Python and PowerShell scripts for infrastructure provisioning, monitoring, and deployment workflows.
- Integrated OWASP ZAP, SonarQube, and CodeQL into CI/CD pipelines for security and vulnerability scanning.

- Monitored and maintained production Kubernetes clusters using Grafana to support performance, uptime, and incident troubleshooting.

Associate Software Engineer

Deutsche Bank (Adecco), Bengaluru *November 2020 – August 2022*

- Built Azure DevOps CI/CD pipelines and Ansible playbooks to improve release reliability and configuration consistency.
- Managed AWS EC2, S3, and RDS infrastructure and containerized application deployments using Docker and Amazon ECS; also supported Docker Swarm-based orchestration.
- Worked with cross-functional teams to align AWS deployments with enterprise security and compliance requirements.

SAP Archiving Specialist

Meera Tech Solutions, Hyderabad *November 2018 – October 2020*

- Managed, monitored, validated, and troubleshot SAP archiving jobs to optimize database size and system performance; maintained operational documentation and reports.
- Ensured compliance with enterprise data retention and audit requirements, collaborating with SAP Basis and functional teams on data lifecycle management and system stability.

Education

B.Tech – Jawaharlal Nehru Technological University, Hyderabad

Languages

English, Telugu, Hindi
